

Even the most privileged people are now also limited by the consequences of years of overexploiting the environment.

The state that regulated public life no longer exists.

Politics and legislation are oriented towards the interests of the corporations, but this does not bother the population much, because people in 2050 are one thing above all: Consumers.

Climate change could not be stopped, but it could at least be mitigated.

In 2050, nine billion people will live on earth.

Many of them in abject poverty and constantly on the run from rising sea levels and extreme weather changes.

*Artificial intelligence is now everywhere:
At home, at work, at school, in public places.*

Upcycling has now become a trend. People are becoming more and more creative. Even old devices like mobile phones are being reused with clever ideas.

The basic needs of all people are met by society. Food, clothing, shelter, and transportation are available to all free of charge.

Many species have gone extinct and the globalised food supply collapsed.

The dramatic social transformations have also led to a loss of confidence in democracy.
